The program uses a bridge or plug-in system that enables software integration for other Adobe products. Bridge enables you to use Photoshop directly with Illustrator, InDesign, and other programs. For screen shots and illustrations, you can use free Photoshop graphics. For more work and higher quality, use the program's paid version, Photoshop CS4 Extended ($199). (See Chapter 15 for help with using Photoshop's tools.) When it comes to image manipulation, Photoshop is the program you need. It's not just for beginners, though. It's the most powerful and versatile image editing program available. Photoshop can work with layers as well as individual raster files, and you get the flexibility of working with vector files, working with image files in many types of formats, and easily retouching images. By combining the different methods, you get a work environment like no other. Managing Photoshop Layers A layer is simply a specialized type of object in Photoshop. All layer-type objects, such as a path, a shape, or a selection, work in the same way. They contain transparent areas that can overlap one another. You can create layers from scratch or copy and modify them. You can even use layers to manipulate and merge multiple images. In case you didn't know, a layer is the type of object used for combining one photo or drawing onto another photo or drawing in Photoshop. For example, you can use one layer to trace a path for a drawing and then use that path to paint over another image. You can add this Path layer onto the Background layer, or use the layer for another purpose. When you apply a Photoshop layer to an image in the canvas, a new area opens up in which you can work to modify the image. You can create new layers in this area. Some of these layers can be directly edited and resized, which means you can simply resize the layer. Figure 12-1 shows the Layers palette with the Paths layer shown on the left in a separate area. **Figure 12-1:** The Layers palette is where you modify layer properties. If you've used other photo editing programs before, you may be surprised at how easy it is to create and modify layers in Photoshop. Beginners are often surprised that a number of the common tasks they do elsewhere can be done in Photoshop with a few clicks. The process is just as easy as editing with other photo programs, but much more powerful. (

Even if the price is a bit high, after you start working with Photoshop you'll find that Photoshop Elements is worth it. The features of Photoshop differ somewhat from version to version, but Photoshop Elements uses a version of Photoshop with some features removed. The main differences are that the shapes and text functions have been removed, the text layers are limited to 8 layers, and text you save in Photoshop Elements comes out line-wrapped, and only up to 20 lines per text file. Many features are similar or identical between Elements and Photoshop. They can be difficult to use with Elements, but once you get the hang of it, you can make great-quality images and work faster and more efficiently with Photoshop Elements. DIPASP EU FP7 projects to foster innovation in digital design and fabrication at universities A new focus on Digital Prototyping and Manufacturing at universities across the EU. The European Commission has today launched the Digital Prototyping and Manufacturing in Europe (DIPASP) initiative, an EU FP7 programme 'to foster innovation in digital design and manufacturing at universities'. It aims to expand the role of universities in the field of Digital Prototyping and Manufacturing (DP&M) – the generation of digital models and 3D printing of prototype parts – in order to increase the impact of this technology. The DIPASP initiative will develop a series of networks and activities for universities across Europe to take part in and contribute to. It is being supported by a two year budget of EUR 4 million (with EUR 2 million devoted to specific training and networking activities), co-financed by the Netherlands Ministry of Economic Affairs, the European Regional Development Fund and the European Investment Bank. Today's release of the DIPASP initiative, after several months of discussions, will encourage universities to become a powerful force in the emerging sectors of DP&M, Digital Content Creation, Digital Business Models and Digital Workflow. The network will be developed through two workshops which will take place in May 2014 at EuroLab in Aarhus (Denmark) and in December 2014 in Zurich (Switzerland). These will coincide with the general launch of the first activities of the Digital Design and Manufacturing Services Strategy (the 'Belfast strategy') as part of the EU's IP Strategy. Raquel Fronteras, Commissioner for Internal Market and Services, said, "Our goal is to make the Internet and digital technologies accessible to all, regardless of their economic standing and social position. Therefore, the Digital Prototyping and Manufacturing strategy will support the development of a number of sectors. "We want to see increased societal impact of IP in Europe through an increased accessibility of the public to digital content, activities and services. It's about making Europeans able to compete globally in the digital environment, i.e. in the areas of design, innovation and production, which will lead to the generation of jobs, and boosting the EU's economic growth and competitiveness," concluded Fronteras. The DIPASP initiative will build upon the existing 'Industry 4.0' action plan, which is
