This new feature allows for real-time physics and environments, enhanced ball control and defensive positioning in multi-player matches. A variety of moves and skills such as dribbling and shooting have been refined for a more intuitive experience, and players now move in a more natural manner. The control scheme has been reworked to offer a tighter, more responsive experience. Players have complete control over the direction and speed of each movement, and using the new throttle system combined with the new pass designs, they have the ability to move and change direction, employing the run button for sudden bursts of speed. The number of game modes has also expanded, including Draft Mode, a fun take on the popular game of football in which 4 teams battle for possession of the ball in 11-a-side, 22-a-side, or Fifa Ultimate Team match; or Pick-Up mode, which allows players to compete in 3-a-

side, 4-a-side, or 5-a-side matches, helping them play exhibition matches against different online and offline opponents; and Local Host and Online lobbies, which will allow the addition of more players during online matchmaking. The game's overall gameplay is bigger, better and more robust, and it offers a FIFA-like experience for new and long-time players alike. FUT makes the transition to the new engine easier by offering a card-based system (every player is assigned a card that they can improve in-game) and new buying opportunities, and players can now start from the beginning of their career as a way to kick off more immersive gameplay.
