We describe eight generations of a non-consanguineous family in which all the male family members, but none of the female family members, have a history of either platelet dysfunction or bleeding. There is one pregnancy, in which in addition to the maternal platelet count the mother also had a fall in the platelet count of 50-70%. Features of thrombocytopenia and impaired haemostasis and platelet function were documented. 1. Field of the Invention The present invention relates generally to the field of alternative energy sources. More particularly, the present invention relates to a method and apparatus of deploying an alternative energy source for generating electricity from biogas by reducing the biogas to hydrogen prior to combustion. 2. Background of the Technology In the past century, world energy use has increased at least exponentially; consumption of oil has increased at least tenfold, coal use has increased more than twofold, and natural gas use has doubled. The majority of new fossil fuel energy comes from coal and natural gas in most c6a93da74d
